

Greener Christmas

The Christmas Party we held in 2022 was a great success! Not only was it a great way to end the school term, but it also protected our environment and saved our Mother Earth.

We were able to reduce a large amount of waste. For example we only used 109 pieces of utensils this year, which was only 1/3 of last year's. We only used 53 plastics bowls. That was about 120 bowls less than we used last year. We were able to reduce 2/3 of the waste we produced in 2021.

Besides using less party items at the party, we saved a lot of materials by using reusable decoration items. For instance, for the decorations of our Christmas tree, we used reusable and recycled items for decorations. We used some of the tableware borrowed from the school canteen. In this way, a lot of waste was reduced.

In my opinion, students should practice green living in their daily life. We can prepare the right amount of food we need for our party. Students should not use disposable party items. They should bring their own utensils to the party. By doing the above, we can live our life greener.

If we always remember environmental protection, we can reduce 2/3 of the waste we produced before and a lot of waste will be reduced.
