

A yellow paper airplane is shown in flight, positioned as if it has just taken off from the top left corner. The background is a collage of various maps, including a world map with the title 'THE WORLD' and 'ON MERCATOR'S PROJECTION', and a detailed map of the Foxen Canyon area showing landmarks like 'Fremont-Foxen Monument' and 'East Oat Canyon Oil Field'.

## **Saving the world and wildlife**

**Chan Shing Ho Phelps 4A (2)**

**Animals are important to human survival, because animals can be used for various purposes. For instance, they can provide food, medicines, clothes, and the like. But, why are many animals encountering the issue of extinction?**

**In recent years, the influence of global warming has grown rapidly due to human activities. The problem is caused by different reasons. For example, over-extraction of petroleum, burning of fossil fuels, transportation, etc. These human activities are destroying the earth gradually. Over-extraction of crude oil can lead to the whole world lacking natural resources. Moreover, there were various harmful gasses produced during the burning process.**

**Besides those, the over-consumption of paper is also destroying the natural environment. The main material for producing paper is wood. People have to keep cutting down the trees to produce paper. It causes a huge negative impact on the world and wildlife. It leads to an increase in carbon dioxide as the rate of photosynthesis is decreased. It also destroys the habitat of wildlife.**

**Then, how can we prevent this from happening to save our planet and those adorable animals? There are some examples in other countries. Using nuclear power to generate electricity has been working in different countries for a few decades. Although nuclear power is not a renewable energy, it can effectively reduce pollution during the generating process.**

**Furthermore, some countries are promoting the use of eco-friendly paper. This paper is made from agricultural residues such as straw and corn husks. These can be used as a raw material for paper production.**

**To conclude, many people have already made a lot of effort to protect this planet. How about us? Should we also take some actions, or just ignore it?**
